

ASTERION GEL are sealed maintenance-free lead-acid batteries with gas recombination system (VRLA). Batteries are manufactured using AGM + GEL technology and are equipped with a built-in LCD display showing the battery status: voltage, charge level and operating time. The information panel is activated by pressing the button. In the case of low voltage, an alarm is triggered. The batteries are designed for standby and cycle uses. Recommended for use in autonomous power systems, and also in conjunction with systems based on renewable.
